

Greetings

I observed a biomass power generation facility in Maniwa city, Okayama prefecture, Japan. By the power generation business, it became possible to sell thinned wood and also it's possible to make trees having good quality, because of the thinned wood is decreased. It is good thing for tree owner. Also, it has good merit for power generation company, because they can purchase the thinned trees by cheap price. It is virtuous circle activity.

I felt that all business of powerful companies or companies keep working for many years do activity that can make the environment influence better.

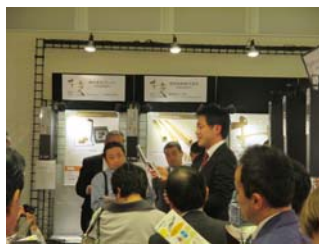

President Takumi Hasebe

Tenichitenjo means days on which Ten'ichijin is in heaven (the 30th to the 45th days of the sexagenary cycle). This year's term is from May 17th to June 1st.

It is said it's luck days wherever we go outside, nothing bad things happen, because Ten'ichijun is in heaven for the terms.

Let's go out somewhere in good weather!
